FEDERAL COMMUNICATIONS COMMISSION
OFFICE OF THE SECRETARY

From: <WLC948@aol.com>
To: A4.A4(FCCINFO)
Date: 8/18/98 11:54pm
Subject: low power transmitters

It would seem that now would be a good time to consider the approval of low power

A.M. and F.M public service stations , due to the increased public distrust of all of

government, this will give those interested in passing along information not normally

carried on high power broadcast stations.

The fact that the stations must please the owners and sponsors limits the content

Thus in the interest of free speech and public education , a void could be filled.

Low power stations would be subject to the same standards as the high power stations

in reference to interference and frequency stabilization , power would be below 10

watts effective radiated power at the antenna.

Since the Waco and the Ruby Ridge incidents the American public is in need of this

type of Service ,please consider this request , this might also reduce the work load of

the monitor stations or at least the federal marshalls .

As it is now the only direct unfiltered communications the American people have are

the shortwave stations ,telephones and satellites, the cost to use these is costly.

most sincerly

William L. Carsey Sr.

P.S. I would like very much to operate a low power station here in Aurora ,ILL ,in both

english and spanish for the benefit and Americanization of all.
