Subject: allow and protect low power radio!

It is very important to allow low power radio stations to continue; it must be a priority to protect them if the citizens United States are to live in a democracy. As citizens today are more often called consumers, it is not necessarily by choice that often all one has to listen to are the conglomerate radio waves broadcasting marketing of products through commercials and their choice of music.

We need to protect the public forum of free speech-- which is the basis of the United States, and one very important medium for this is radio.

Thank you,
Mara Pelecis
