Subject: Comments to the Chairman

Jeff Burgess (Stopcat) writes:

I was wondering how the Micro Radio operators could possibly join the FCC movement to expand radio. Bakersfield, California just lost Radio Free Bakersfield for good according to a newspaper story published last friday. It is sad since all the people quoted agreed that the station was a huge asset to the town. The local community college lost funding to have a radio station a few years ago and this seemed to be the natural alternative since our tax dollars can no longer support a college station here. The station was gaining alot of support from many people I spoke with and it appeared to be the number one choice of most folks under 25 in this town. It is a frustrating situation since the station reached out to the community unlike any other. Just an entertaining group of young people who were trying to make a difference. There has got to be a change to allow this form of radio as people are tired of canned statements and restricted playlists.

I was just pondering these thoughts as I listen to silence on the dial.
