RE: Ultra-Wideband N.O.I., ET Docket 98-153

Dear Ms. Magalie Roman Sales:

My name is John Fenn. I am the President of NeoVac, which is a thin film vacuum coating operation in Santa Rosa, California. We are looking into the possibility of providing components for UWB which incorporate thin film techniques as a low cost high volume method of production.

If UWB technology is approved, it could mean the possibility of improved technology and lower costs of information communication. We hope that the Federal Communications Commission will modify its rules to allow for Ultra-Wideband because of its benefits to both consumers and many areas of industry.

Sincerely,

John B. Fenn
President, NeoVac
