

Thank you for responding to the need for FM low-power stations! Many areas have such crowded FM bands that this would not be a possibility ... but many more areas have gaps that could be filled by local, neighborhood broadcasters. I think this is great. Please make it happen! One way to insure that "devastating interference" does not occur, is to make the low-pwr broadcaster pay for the spectrum assay(?) in their area that would insure that the low-power doesn't step on existing licenseholders' freqs: no cost to taxpayer, and citizens get more freedom.
