

I am one of the heads of a cable current radio station at Milton Academy in Milton, MA (89.3FM WMAR). We've struggled a lot since our birth in 1995 because of the large cost

behind installing cables throughout the school which has about a three mile radius from the studio. This proposal (low power FM) would help us a great deal. Not only would our station reach a broader audience, but it would provide a great form of communication for the students who view WMAR as somewhat of a joke. PLEASE HELP.
