

I,m a private citizen trying to bring urban radio to an already saturated area, so this proposal is an avenue that I can explore. Working in broadcasting for over 10 years I come to realize that there are areas in the USA that will never have the chance to hear any music related to there heritage, corporations have taken up all that is available and priced it so that it is impossible to purchase when resold. coming from a citizen that will have to win the lotto to get a minority radio station in this area I find this proposal very refreshing. Only thing is thing is that availabilty should be reserved for that in which this proposal was initated for. Remember this the airwaves belong to the people not the corporations...which it is becoming abundantly clear the people are not winning. thank you
