

With the quality of FM radio signals slipping due to the closeness of signals why would degrade broadcasts further with LPFM?

Why also would you set up LPFM before Digital Broadcast Methods have been determined??

If LPFM is permitted what would prevent a large entity from obtaining a group of licenses in Prime broadcast areas and simulcasting via a web/ Network and actually being a mini High power station with selective broadcast territory (pulling Just the Cream of an area) and not serving the general population?

Thank you for your time.
