

Hello to the Mr. or Ms. reading my comment,

I am writing to you about the proposals concerning small, low powered radio stations becoming legal. I would be so VERY happy to see this go through. I have always wanted to start a small, very low powered radio station that would reach my local community but ran into a dead end when I reviewed the FCC's acts and regulations. As long as we don't interfere with the other large radio stations, we should be allowed to have access to the airwaves, especially in low power format. As long as we are only broadcasting to a very local area, such as a 3-8 mile radius, I see no reason not to be granted permission to broadcast. I completely agree with your organizations hesitation of letting people just start up their own station on the fly because poor equipment could result in interference with other, established and legal stations paying for the right to broadcast to the public. If there is anything I can do as a low power radio enthusiast, please let me know. The idea of LPFM is very interesting to me and I intend to follow this proposal until the end.

Thank you very much!!!

Adam Ross
