

Both the proposal to create low-power (100 and 1000 watt) radio stations and the proposal to create micro-power (1-10 watts) radio stations are good and valid proposals and should be passed accordingly and in timely manner.

The time is upon us in our great country when you must have enormous financial backing to take advantage of the radiowaves which are all around you.

Communication is a core element of democratic society and radio communication should be made available to even people who do not wish to make their career in the business of radio.

I'm sure that you will receive many of these same comments and I hope you take them to heart. This is an important decision and one that could affect and improve the lives of many people.

Though I understand the reasons to debate this -- the safety of airplanes, ambulances, etc -- I firmly believe that this proposal should be passed and once passed it should be promoted.
