

Before the Federal Communications Commission

In the matter of) MM99-25  
RM9208  
RM9242

Regarding the petition of the National Association of Broadcasters' to greatly push back the dates for comments and reply comments, pending receiver studies to determine the effects of decreased channel spacing. I hereby urge this Honorable Commission to reject this request, as the NAB has had plenty of time to at least commence such a study. They should have known way back last year when RM9208 was accepted that this could potentially affect them, and not wait until now. It is effectively denying those of us interested in such a service our day in court, as it were. I will be submitting some findings of my own with my comments to be received by the Commission no later than April 12, 1999. Admittedly I'm no PE, but I believe my findings will be useful, nevertheless.

Thank you for your time,

Scott Todd
