

I would like to start a low power fm station in the 25-100 watt range
LPFM stations should be limited to one per person/company nationwide.
We need to have more locally owned and operated stations targeting specific
communities. I believe that all stations should be limited in power to only
give coverage to one metro area. In other words completely eliminate 100kw
stations

I hate the fact that big companies control most of the radio in the U.S.A.
Current

"pirate" stations operating in the 25-1000 watt range should be allowed to be
licensed. Preference should be given to applications that a submitted by
individuals

and not to companies/corporations. I believe the current FCC policy of
auctioning out

stations to the highest bidder should be eliminated. We need a "one person, one
station policy"

We need the public, not the corporate, voice over the airwaves. thanks for your
time.--mark h
