Subject: MM-Doc. 9925

Gentlemen,

This is in support of your proposal for low power for broadcasting. There is a great need for localized service in most all communities. With the consolidation of large broadcasters owning groups of stations in each market there is a crying need for single independent operations serving communities in many ways. I realize that the current FM broadcasters are concerned about the degradation of their signals. There is no way a 1 watt, 100 watt or a 1000 watt is going to hurt any of the powerful stations, particular from a long distance.

You certainly have a great idea to utilize the spectrum more efficiently.

I for one will apply for one of these for our community and plan to serve this community with something that is not available to localized level here in Naples, FL.

Very Truly Yours,

Mark L. Wodlinger  
Owner
