The Honorable William Kennard
Chairman
Federal Communications Commission
445 12th Street, SW
Washington, DC 20554

Dear Mr. Chairman:

I am writing to express our concerns about the Notice of Proposed Rulemaking that the FCC has begun on the issue of low-power FM, also known as microradio.

The FCC is charged with the responsibility of insuring that our broadcast and other services are maintained in as interference-free an environment as possible. It is clear to me that the Commission is giving serious consideration to abandoning its interest in protecting against interference by looking to add these new low - power stations.

Unless second and third channel interference protections are reduced, there can be no low-power FM stations added in most major markets. The only way those stations can be authorized is to reduce the protections against interference that make the FM band listenable. I see no public benefit from such an action.

We do not see any forethought in this notice regarding the planned transition to digital audio broadcasting. Local stations will hopefully soon be adding a digital system on top of their analog signals within the same band and channel. This service promises greatly improved clarity and service to the public. Yet the addition of micro or low-power stations has the potential to seriously impair the ability of the digital signals to reach listeners unimpeded by interference.

This rulemaking is far in advance of the science and research needed to demonstrate that it is both technically feasible as well as good public policy. While I understand the interest many may have in becoming broadcasters, it is my understanding that there are still AM and FM licenses available for application. Indeed, some of those applications are pending even as the Commission prepares to push ahead into low-power FM.

We would urge you and your fellow commissioners to give serious consideration to placing any low-power FM actions on hold until and unless these technical issues are resolved and rules are adopted for digital audio broadcasting. American listeners depend on local broadcasters for important local news, weather, and emergency bulletins, public affairs and other programming. We should not be putting access to that programming at risk by bringing on-line a new, untested and technically infeasible radio service that seems driven less by good public policy and more by an interest in placating pirate radio operators.
