

In reference to the proposal of allowing low power radio stations I am in favor of it. I also support the ideas put forth in RM-9242, for the most part. What I do disagree about RM-9242 is the idea that microstations 1-10 watts should not be allowed.

I personally would like to start a station of this size, with community service being the focus. I live in an area of apartment complexes that would be easily covered by a transmitter of this size and think it would be a beneficial service to the elderly and shut-ins that live in the area. They are more concerned with the events happening in their own backyards, rather than on a statewide, countywide, or even citywide.
