

Please create a low power FM radio service. We need to keep radio accessible by the poor and middle class, by the youth and by minorities. We need diversity in broadcasting. Low power FM will be key to restoring a sense of community to radio broadcasting. We *need* low power FM radio. I feel this from a social and political standpoint. We *can make it work* from a technical standpoint, based on my experience as an Amateur Radio Operator. There are lots of motivated and bright people waiting in the wings to have their voice. Please create a low power FM radio service.
