

Dear FCC,

Low-power radio could provide unique opportunities for community-oriented broadcasting and promote greater diversity on the radio spectrum. Additionally, community-based stations could become important forums for debate about local issues. As FCC Chairman William Kennard said, "We cannot deny opportunities to those who want to use the airwaves to speak to their communities simply because it might be inconvenient for those who already have these opportunities."

Please expedite the process that will allow low-power radio to become a reality. Myself and my fellow DJs at our college station KVRX-FM Austin, are looking forward to these dramatic changes in the radio spectrum.

Sincerely,
Hope Munro Smith
