

I would like to make my voice known on this issue of LPFM. I currently work in both non-commercial and commercial radio, and find the community connections with smaller, non-commercial radio much stronger. I believe that this service would provide communities with a station that performs in their interest than the large broadcasters nowadays. It is rare to see a commercial broadcaster change a format to one that takes input from it's service area (ex: KSMM-AM Shakopee, MN). I think this service would find a good place in middle to upper level cities where commercial radio is noticeably out for profit than community interest.

I would strongly suggest you approve this measure because I personally know several people who would like to make a broadcast difference in their communities.

Thank you for your time.
