

A grayscale outline map of the state of Arizona is centered on the page. The map is divided into several rectangular sections by gray borders. The top section contains the text "Arizona Microradio Association". The bottom section contains the text "Proposed Arizona 99-25 LPFM Bandplan".

Arizona Microradio Association

**Proposed
Arizona
99-25
LPFM Bandplan**

REVISION “A” - JUNE 27, 1999

1. OVERVIEW

In this document, we demonstrate the need for frequency coordinators in the Low Power Radio Service. According to the REC Networks (REC) proposal, each state or region would have an FCC accredited frequency coordinator. Frequency Coordinators would perform the following functions:

- Maintain a master database of LPFM stations in the coordinator's jurisdiction as well as other LPFM stations within 100 km of the boundaries of the coordinator's jurisdiction.
- Establish an LPFM channel usage plan based on the specific needs of the coordinator's area.
- Receive requests for LPFM channels from prospective applicants.
- Use the LPFM database and the established band plan for the region to find a channel for the applicant which meets FCC interference guidelines yet provides minimal spacing in order to use spectrum more efficiently.
- Work with coordinated stations to work out short spacing agreements for stations which do not meet FCC interference guidelines but can operate without interference.
- Coordinate time sharing agreements between LPFM stations.

2. ARIZONA MICRORADIO ASSOCIATION

The Arizona Microradio Association (AZMA) was founded by Rich Eyre of REC Networks. The goal of AZMA is to become the frequency coordination council for the State of Arizona. If LPFM is legalized and the FCC accepts the policy of frequency coordinators, AZMA will then be a non-profit democratic organization. At that time, membership in AZMA will be open to all LPFM licensees. Paid membership in AZMA is not required to receive coordination services.

3. AZMA JURISTICTION

AZMA will provide coordination services to the entire state of Arizona plus the areas of California and Nevada along the Colorado River.

4. THE PHOENIX MEDIA MARKET BANDPLAN

Under the REC LPFM proposal, stations within 100 km of the top 50 media markets would have a power limit of 100 watts and the 100 watt stations (which REC refers to as "A3") would be primary instead of secondary. In AZMA's band plan, we attempt to place one 100 watt station in each incorporated city within Maricopa County. Due to the limited number of available allotments in the area, some cities may not receive an allotment and some smaller cities were allotted 10 watt (D2) stations. *REC's Phoenix Plan is just a demonstration of the ability of providing the most LPFM stations while avoiding interference to full powered broadcasters.* The key frequencies in the Phoenix area for 100 watt LPFM stations is 99.1 (channel 256) and 105.1 (channel 286). Other channels are used in certain portions of the county only.

In the outlying rural areas, AZMA was able to provide a single 100 watt (A3) allotment to most communities.

5. DISTANT TRANSLATORS IN THE PHOENIX AREA

Under the REC LPFM Plan, if there are no LPFM channels available for an applicant, the LPFM applicant can request a frequency that displaces a “distant” translator. (Primary station is more than 400 km away from the translator). Under the AZMA plan for Phoenix, displacement of distant translators on 89.9 (channel 210) in Phoenix and Mesa as well as the 91.1 (channel 216) translator in Guadalupe was required. No other translators in the state were displaced under the AZMA plan.

6. LPFM IN THE TUCSON AREA

Tucson is outside the Phoenix Media Market and is eligible for LP-1000 stations. In order to promote diversity, AZMA’s Tucson plan allows for more stations to get on the air by pre-coordinating only 100 watt (D1) and 250 watt (A2) channels in the area. Some outlying areas do have 1000 watt (A1) allotments.

7. LPFM IN RURAL ARIZONA

In rural Arizona, AzMA has ranked each city, town and census designated place (CDP) and attempted to assign three channels to each community. One channel would be in the commercial (92.1-107.9) portion of the band. A second channel will be taken from the reserved (88.1-91.9) portion of the band. If no channel is available above 88.1, then AzMA will assign 87.9 (Channel 200). A third channel is then assigned as 10 watts (D2) for shared usage between high schools and other LPFM stations. Channel 198 (87.5 MHz) is assigned whenever possible. If Channel 198 is not available, then we will assign the lowest grade channel available. In some cases, we were not able to pre-assign a channel. Channels are pre-coordinated for the highest power levels possible.

8. CHANNELS FOR COMMUNITIES WITHOUT ALLOTMENTS

Upon request, AZMA will allot a community in Arizona with a new channel. The channel must meet all FCC interference guidelines and does not conflict with any rural pre-coordination in Arizona or a rural pre-coordination in another state.

9. REQUESTS FOR LOWER POWER COORDINATIONS

Even though AZMA has pre-coordinated LPFM in Arizona, in many areas there's plenty of additional channels available. If an LPFM applicant is proposing operation at a power which is lower than the channels pre-coordinated in the applicant's community, AZMA will pre-coordinate a different channel if another channel is available. If no other channels are available, then AZMA will coordinate the operation on an available channel with the lower power limit.

10. REQUESTS FOR A HIGHER POWER COORDINATION

If AZMA receives a request for a higher power station on a channel which is designated for lower power (for example, running 1000 watts on a 250 watt coordinated channel), AZMA will review the channel to make sure that a higher power coordination will not violate FCC interference guidelines or AZMA's short-spacing guidelines. If the channel is suitable for higher power operation, AZMA will grant the upgraded coordination.

11. REMOVAL AND RE-USE OF UNUSED PRECOORDINATIONS

We realize that not every community may not apply for an LPFM station and therefore we have reserved channels which no one would be interested in applying for. In the event that another area needs a new channel and no channels are available due to AZMA pre-coordinations in an area without LPFM service, AZMA will attempt to move the other community's pre-coordination to another channel or completely delete the pre-coordination after giving notice to the LPFM community.

12. HIGH SCHOOL “SPLIT” CHANNELS

AZMA has pre-coordinated every public high school on an FM channel. In the Phoenix area, most high schools will operate on 87.5 (channel 198) with overflow on 87.9 (channel 200) and other channels. In the Tucson area, the primary channel for high schools is 106.9 (channel 295) with overflow on 106.7 (channel 294) and other channels. In rural Arizona, 87.5 (channel 198) is assigned whenever possible. Almost every city, town or CDP has been pre-coordinated a high school channel, even if there is currently no high school in the community. In order to meet the needs of high school broadcasters as well as the needs of “hobby”, “community” broadcasters as well as churches who do not broadcast on a full time schedules, we will place these types of stations on the high school channels with a master timeshare agreement. High schools will operate on the channel Monday through Friday between 6AM and 5:50 PM local time. During the high school football season, high school station schedules will be extended to 11:50 PM on Friday nights. The other 10 watt licensees that operate on the split channels can operate between 6:00PM and 5:50PM local time Monday through Friday (during high school football season, non-high school station's schedules will begin at 11:00PM on Friday nights) and all day on Saturdays and Sundays. Operations during summer and holiday vacation schedules will be coordinated between the high school stations and AZMA.

13. HIGH SCHOOL STATION INTERFERENCE CRITERIA

On the high school channels, AZMA will coordinate stations to meet FCC standards which is 7 km spacing between 10 watt stations. In some cases, AZMA will recommend spacing which is shorter than the 7 km guideline. In most cases, stations spaced between 6.4 and 7 km will receive short spacing. Other short spacing arrangements will be made when the stations are blocked by natural terrain. Several Phoenix area high school stations operate under short-spacing.

14. USE OF CHANNELS 198, 199 AND 200 (87.5-87.9)

The REC plan calls for the assignment of these channels to 10 watt (D2) microstations. Our proposed interference guideline is that the channel 199 is not available within 200km of a full powered TV Channel 6 station. Channels 198 and 200 require 138km spacing. Full powered Channel 6 stations are located in Tempe and Kingman. These channels also protect LPTV stations on Channel 6 with a minimum distance of 89 km for Channel 199 and 46 km for Channels 198 and 200. Out of all of the channels, channel 198 is available in most of Arizona. Channel 199 is available in very limited areas and AZMA will not coordinate on this channel in most cases. A typical case where AZMA may coordinate Channel 199 is where a second high school between 4 and 7 km is seeking

coordination and Channel 199 is available. 10 watt operations on Channel 200 (87.9) must protect operations on Channel 201 (88.1).

15. CHANNEL SELECTION CRITERIA

Unless otherwise advised by the FCC, AZMA will use the following criteria when selecting channels. REC's proposal calls for a totally non-commercial LPFM service. AZMA will try to coordinate as many stations to the reserved (88-92) band as possible. Frequencies are assigned to the power requested. For example, if the area has two channels, 212 which is a 250 watt channel and 268 which is a 100 watt channel and the station is proposing 100 watts, AZMA will assign on 268 (even though 212 is in the reserved band). If both 212 and 268 were 250 watt channels and the applicant was requesting 100 watts, AZMA will allot Channel 212 as it is in the reserved band.

16. ASSIGNMENT OF CHANNEL 198 (87.5)

In areas where Channel 198 (87.5) is available, AZMA will assign this station exclusively to the high school weekday/split service. If no other channels are available, AZMA will coordinate a full-time 10 watt station to Channel 198.

17. TIME-SHARING ON OTHER CHANNELS

It is the expectation of AZMA that stations which propose to broadcast less than 12 hours a day would, upon request of AZMA or the FCC, go into a time share agreement with the new applicant. Stations are expected to adhere to their hours of operations. Any changes to the time share agreement should be communicated to AZMA.

18. SHORT SPACING

All coordinations are issued based on FCC interference guidelines which requires a specific distance between co-channel and first adjacent channel stations. Under REC's proposal, full power second adjacent and IF channels are protected from 250w (A2) and 1000W (A1) stations. In some situations, two LPFM stations can be separated at a distance shorter than the interference guidelines, especially where terrain shields the two stations. AZMA will review all short-spacing requests on a case by case basis and will communicate recommendations for short spacing to the FCC. AZMA will only short space LPFM stations. AZMA will never violate distance spacing guidelines between an LPFM station and a full power, channel 6, translator or booster station.

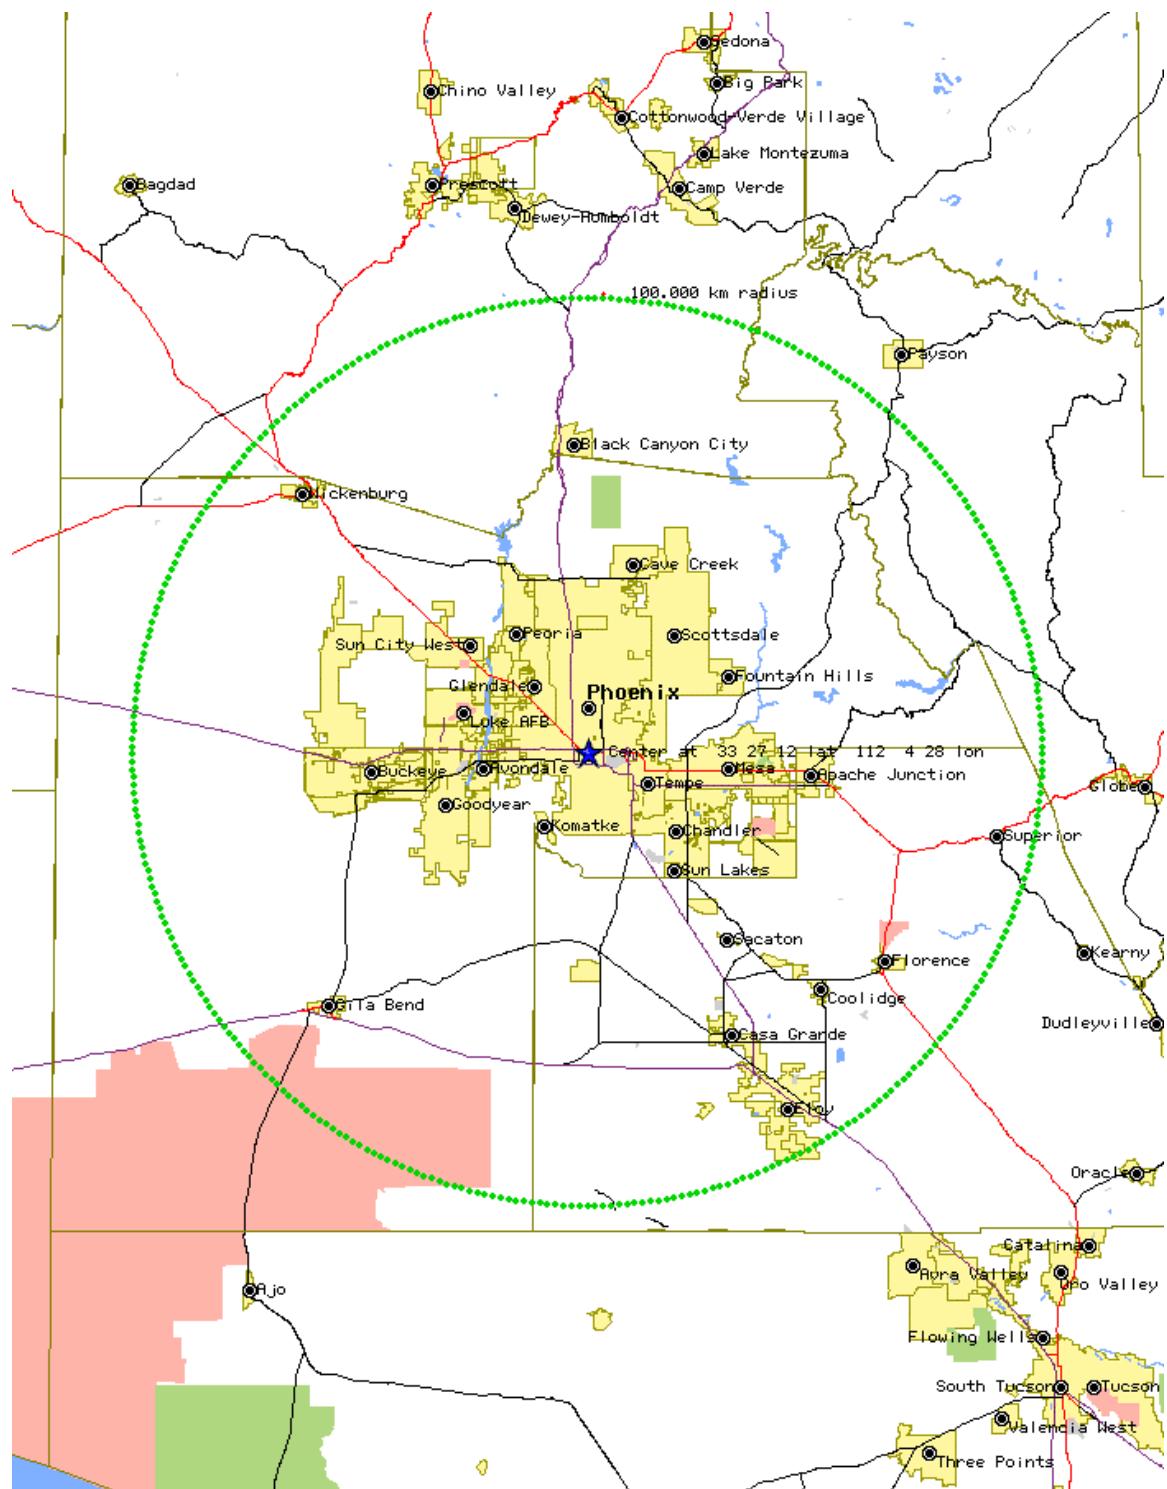

19. LOW POWER AM

In the REC proposal, 10 watt AM stations should be made available if no 10 watt FM channels are available. AZMA will pre-coordinate AM if no 10 watt FM channels are available and there are no short-spacing options available. AZMA has pre-coordinated several high schools on AM due to FM spectrum congestion.

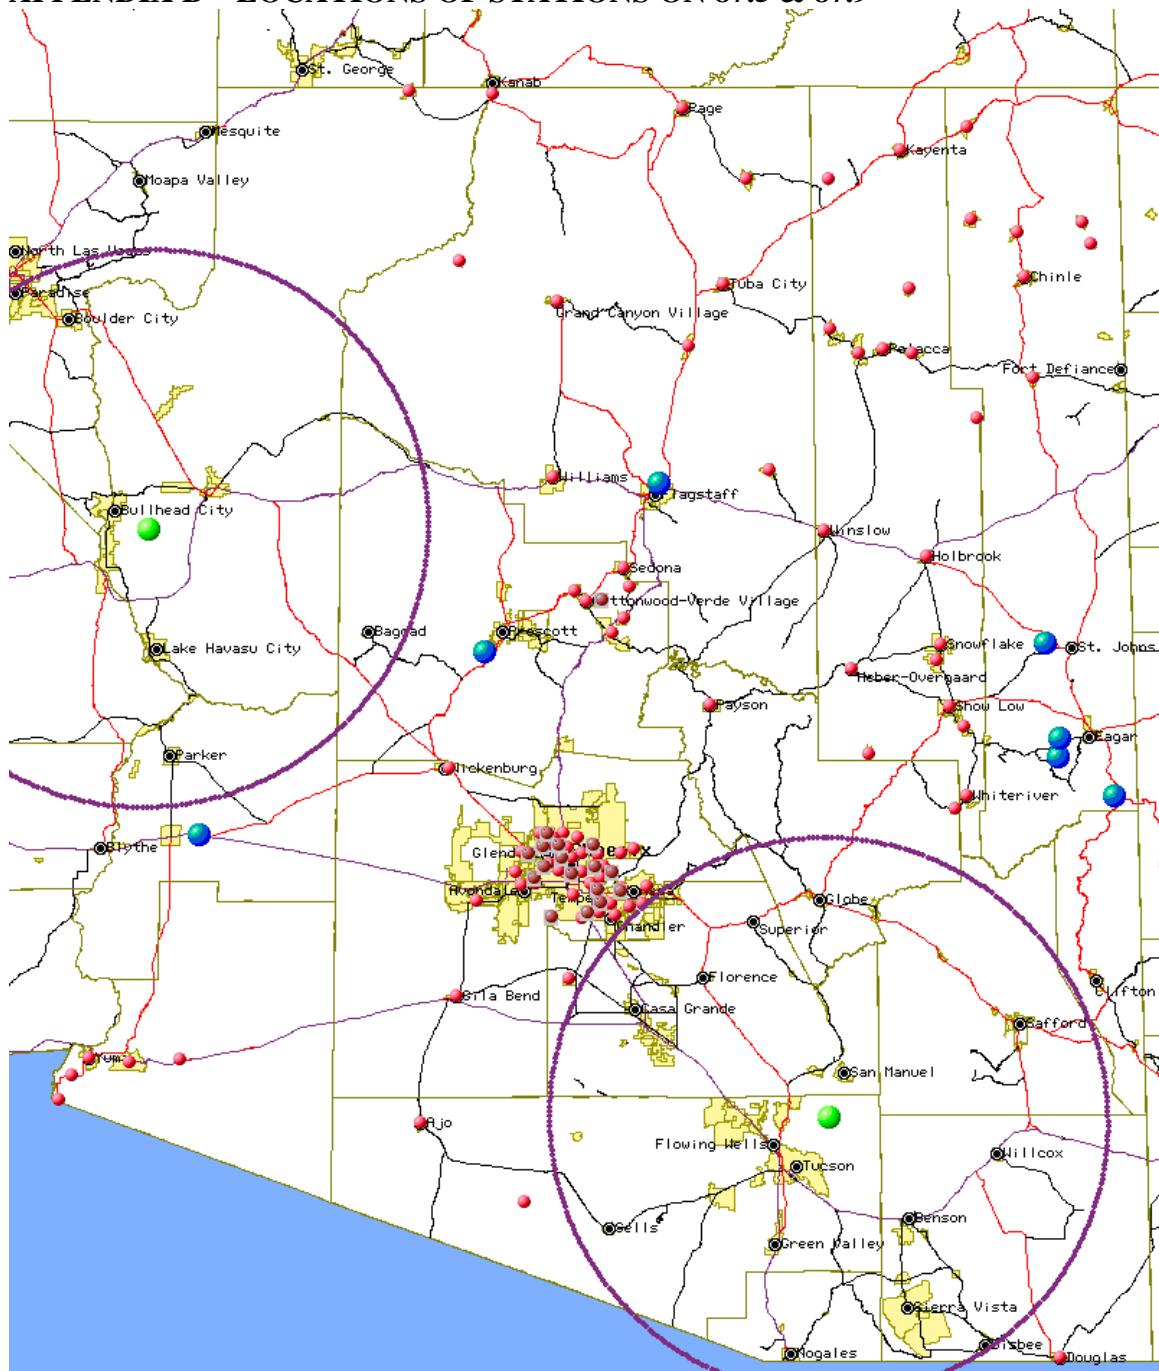

20. CONCLUSION

AZMA feels that with proper frequency coordination and a level of self regulation, LPFM stations would be able to operate with maximum spectrum efficiency while preventing interference to other broadcast services.

APPENDIX A-PHOENIX MEDIA MARKET

APPENDIX B – LOCATIONS OF STATIONS ON 87.5 & 87.9

Red dots are 10 watt pre-coordinations on 87.5 (Channel 198). **Brown dots** are 10-watt coordinations on 87.9 (Channel 200). **Big green dots** are full power Channel 6 stations (KUAT-Tucson & KMOH-Kingman). **Blue dots** are Channel 6 translators. The **large circles** are the 138km protection contours around the full power Channel 6 stations. No LPFM stations on 87.5 or 87.9 within this area. As an alternate, high school stations in Tucson will be pre-coordinated on 106.9 and 107.1 and high school stations near Kingman will be pre-coordinated on any available 10 watt channel.

KEY TO CLASSES:

A1 – REC proposed 1kW/60m HAAT. FCC proposed LP-1000 service.

A2 – REC proposed 250w/40m HAAT.

A3 – REC proposed 100w/30m HAAT within a Top-50 Media Market PRIMARY.

D1 – REC proposed 100w/30m HAAT outside a Top-50 Media Market SECONDARY. Also FCC proposed LP-100 service.

D2 – REC proposed 10w/10m or 1w/30m microradio service. FCC proposed “microradio” service.

APPENDIX G – LOW POWER AM IN PHOENIX

1630	AM	Peoria-Ironwood
		Avondale-Westview HS
1640	AM	Phoenix-North HS
1650	AM	Phoenix-Maryvale HS
1670	AM	Phoenix-Moon Valley HS
1660	AM	Phoenix-Washington HS
1680	AM	Phoenix-Trevor Browne HS
1690	AM	Peoria HS
		Mesa-Westwood HS
1700	AM	Metro Tech
