Re: MM Docket No. 99-25

Dear Madam:

You will find enclosed the original and four copies of my comments in the Proposed Rule Making to create a new Low Power Radio Service, MM Docket No. 99-25.

Sincerely yours,

William O. Barry

Comments,
William O. Barry,

92.8, etc. No existing licensed FM station would have to change frequency, decrease its power, or reduce its coverage; however, it would double the amount of FM assignments available.

A 100% modulation of the FM aural TV transmitter has only a ± 25 kHz deviation. It sounds great and has stereo too. The new FM 100 kHz channel with its ± 37.5 kHz would be better.

All analog tuned FM radios would be able to tune these new channels now, and most digital tuned stereo FM receivers sold today in hi-fi stores tune these new channels too.

Canada and Mexico would probably welcome the additional new FM channels, however, if they did not accept it we would only have to restrict any new USA channel assignments for about 200 miles along our borders with these two countries.

Since the FM band was moved from 40 to 50 MHz in 1946 it has taken over 50 years to fill up 88 to 108 MHz. By doubling the number of available FM channels we shouldn't run out of space until 2050.

Respectfully submitted,

William O. Barry
