

Several years ago you did the NAB a big favor by letting them purchase unlimited stations. That rule left my city without a Black Radio Station. Low Power Commercial radio FM radio will fix that problem. Its a shame that cities like Muskegon, Mi. Omaha, Neb., Denver,Co and Grand Rapids, Mi. do not have a Black FM Radio Station. However if you allow LPFM it could be a big help to the minorities in these cities. These small communities need small community commercial radio stations anywhere from 100 to 1000 watts. However if you do past this rule, please go with the first come first served. An auction will hurt more minorities because the rich will now have control over the high wattages stations and the low power stations. Lets get radio back into the community with LPFM.
