

I've been a Broadcaster for over 25 years. I've seen many under financed broadcasters who have little to fear by not following FCC Rules & Regulations and who don't use properly maintained broadcast equipment. Low Power FM's will allow all kinds of people to broadcast who won't have the financing and or knowledge properly maintained broadcast equipment to create all kinds of interference for broadcasters who have spent years serving their communities and problems for the already under staffed FCC to monitor and regulate! Low Power Radio is a terrible idea and I oppose it totally.
