

I encourage approval and movement forward in licensing low-power FM stations and would be very interested in licensing one in this area (called Hocking County). This area is primarily a tourist area during the summer, yet no station services this audience with information. The only station in this area is a Country station that plays music and reports community information that is of little interest to visiting tourists. I support low powered FM in general and request that I be notified upon approval of 99-6 so that I may apply for a license to serve this area with new 1000 watt information.

Best Regards,

Timothy J. Zysk
