

To the Federal Communications Commissioners:

We strongly support adoption of the FCC's Low Power FM (LPFM) proposals to create licenses for radio stations broadcasting at 1000 watts, 100 watts and 10 watts. Our rural community currently has no local public radio station due, in part, to the prohibitive costs associated with licensing and equipping such a station under current FCC rules and regulations. Furthermore, in the wake of the Telecommunications Act of 1996, commercial and noncommercial stations from outside our community have monopolized the available FM frequencies and prevented us from gaining access to the local airwaves. This is a disservice to our community, which would be greatly enhanced by the establishment of a low-power community-owned and operated FM station. By approving the proposed Low Power FM licenses, you would help give our community the local voice it needs and deserves.
