

Dear Sirs:

We would encourage you to license low power FM stations. Our church has many elderly members that are not able to leave their homes, or are in nursing homes. If low power FM stations were allowed, we could broadcast our Sunday worship services to most of our shut-in members allowing them to feel a part of the congregation and to grow spiritually. We also have members who have been ill or in the hospital for a few weeks and would benefit from being able to receive the worship service. A low power FM station would be ideal for our situation. Our community is approximately 2,900 people, so a signal coverage of about 3-5 miles that could be picked up on a FM receiver would greatly benefit all the members of our community. Our congregation is very interested in this as an option for our members and will apply for a license when and if you approve low power FM stations.

Thank-you!
