

I do hereby send to you my support in favor of the creation of a low power fm radio service open to all citizens of the United States of America. The time is now. The need is great. The benefits are even greater. The voice of the local communities needs to be protected. This current Commission will be well remembered by all as the one that stood up and said that the voice of the people shall be protected and not silenced. These MegaCorporations that would silence this effort should not be able to abridge the right of the local communities to speak to one another over the public airwaves. We are all in this with you. I have already become involved in the effort to block any legislative efforts to overturn any Low Power Radio Service that is viable and meaningful. The very idea that less than one dozen Mega-Corporations should own nearly every major radio signal in the top one hundred radio markets is totally wrong in my mind and very anti-competitive. Is the Commission unable to say the word NO to these applications for transfer of Control. If so, when did it lose the authority to say enough is enough. Just wondering.

Thanks for your time and long live LPFM. We really need it.
