

Dear Sirs:

I have been conducting ground penetrating radar surveys (GPR) surveys for 10 years. GPR is a very important service to utility companies that cannot locate plastic (PVC) pipe by any other means.

Lives are lost and property damage is high when pipes (including gas and electric pipes) are not detected. GPR can locate these pipes.

Please do not restrict GPR from contractors like me. Lives of innocent people are at stake.

By restricting GPR from contractors like me, you will not only put me out of business but people will get injured or killed by undetected pipes not found by GPR.
