

Global Crossing has filed for chapter 11 bankruptcy protection which wipes out the 401K plan of mine and other former employees of Global Crossing. Recently it was announced that a restructuring plan was announced and that the Global Crossing assets of approximately 22 billion would be sold to two companies in Southeast Asia (Hong Kong & Singapore) for 250 million.

Mr. Gary Winnick the head of Global Crossing who cashed in stock and left with approximately 734 million was also part of one of the Singapore company. He has since resigned from the board of directors of that company but I am sure has vast financial ties to it.

The other company (Hutchison Wampoa) out of Hong Kong is owned by the Chinese. The sale of the Global crossing fiber assets would now result in the Chinese having direct asset into all traffic carried on the fiber backbone of Global Crossing. This fiber connects most of the major cities in the United States with European and South American countries.

I feel this would be a tremendous risk to companies that used this network for transporting their data and could very likely become a National Security risk. With this in mind I would ask the FCC investigate the potential problems that would result if this network were sold to the above mentioned companies. I have serious concerns not only with the sale for the dollar amount offered but also with the people now owning a direct link into the heart of the United States. Therefore, I would ask that you deny the approval of the license transfers and stop the sale of Global Crossing.

I would appreciate a response to this letter.

Thank You
