

Sioux Valley Wireless is an FCC Authorized MMDS Video and Two-way MMDS wireless Internet service provider in South Dakota. We operate wireless licensed MMDS Internet systems at three tower locations in eastern SD and are rapidly growing and adding new MMDS wireless Internet customers every day. We fully support the WCAI and the recent Petition for Reconsideration filed by WCAI on April 7th. Expansion within the Sioux Falls, SD BTA that we own, for MMDS frequencies, over the next 12-18 months will require additional licensed hubs. Without the ability to license and install these new hubs, our business and success will be greatly compromised. We ask the FCC staff that the WCAI Petition for Reconsideration be swiftly acted upon so we can continue to expand our phenomenal growth in rural high-speed licensed MMDS broadband in rural SD within the licensed BTA that we own and have purchased at FCC auction.
