

I wish to express my DISAPPROVAL of permitting Broadband Over Power Line service.

My situation is probably a bit different than most. I am in the computer industry, and setup broadband connections for customers. Even though BPL would provide more economic opportunity for me, I am still OPPOSED to BPL. The reason is simple: the power companies routinely ignore radio and television interference complaints. BPL will only make interference worse. I have been on the receiving end of their interference, it is impossible to get power companies to investigate and repair interference problems. We don't need more RFI. We need less. Please put a quick end to this idea.
