

I am a Licensed Amateur radio operator callsign w8ob. I would like to see you rule against this proposal. Already most of the frequencies in the radio spectrum are experiencing severe interference from data providers that are using shielded transmission lines and from countless numbers of consumer devices that are in violation of specified output levels. Approval of this proposal will result in most radio communications becoming useless and subject to extreme interference that will affect the ability of other licensed spectrum users to be unable to use radio for conduction of business and worse disabling radio systems that could and will be used in the event of emergency disaster comms.
