

I believe that allowing PLC technology to be allowed in this country will severely hamper the effectiveness of HF communications, in particular, amateur radio. As power lines are natural radiators at the frequencies in question, RFI to other services cannot be avoided. The interference potential has been demonstrated in other countries that have experimented in this technology.

In this time of increased national security concerns, we cannot afford to cripple the nation's only reliable backup volunteer communications system.

Sincerely yours,

Philip A. Neidlinger, PE
