

I think the Broadband over Power Line is a very POOR idea for the FCC to consider in any way. As a 25+ year amateur radio licensee I have seen so many of these good natured ideas go bad. BPL will for sure, cause very much radio and television interference. This will boil down to more work, stress and cost to the FCC. Why open up this ugly can of worms? Access to the internet now is about as simple as can be, and cheap even for wireless.

As we have seen from so called closed cable systems, the operators don't and won't in lots of cases, maintain the system as the FCC wants. Please do NOT, I repeat, do NOT Consider BPL as a pragmatic, needed system. Thank you.
