

Dear Sir and Madam,

The proposal of using BPL or PLC is disturbing to me and I object. This technology will interfere with the existing HF radio spectrum and the frequency allocation used for long distance communications.

The harmful interference caused by this technology is a "side affect" of the actual technology used over the powerline. The interests of the implementers of this technology have no regard over the existing domain of the HF radio spectrum and if they did would provide solution to prevent/curtail this RF pollution.

In brief, on a moral level conceptually, one User's interests should not be put above another established User's interests. On a legal level, causing of harmful interfere intentionally or unintentionally in the RF spectrum is against the law.

Sincerely,
F. Fuentes III
