

I regularly use the HF spectrum to communicate locally and long distance as an Amateur Radio Operator. I frequently have interference from bad connections on power lines. The local power company has been very good about working with me to eliminate the problem. They realize it is illegal for them to cause interference. This proposal would make interference legal and widespread. Remember that amateur radio has long been used during times of emergency and disaster, even in recent history. Do not allow this to be taken away from the American people.
