

I'M all for progress. But not at the expense of someone else. Please do not allow the greedy power companies to get into PLC without assuring no interference to any other service. And that includes Amateur Radio. I understand the interference to the HF bands has been terrific at locations where PLC has been implemented. If it was an amateur radio operator causing interference like this you would shut him down.

I think the same should go for the power companies. You are in control. So please control this also. Thank you and God bless.
