

I would like you to know that I am opposed to PLC. Overwhelming evidence shows that PLC is a serious interference hazard to HF communications. The power distribution system was NEVER designed to be used in this fashion. I use the HF spectrum and there is more than enough RF pollution from TVs, computers and other poorly designed home electronics. I understand the need to deploy broadband, but deploying it on the power grid should NOT even be considered. The interference potential is too great.

Thankyou for listening
