

Hi, I would like to comment on the PLC (BPL) issue, now would these lines not be intentional radiators? since they are not shielded, and effectively block amateur to amateur communications during normal/and emergencies? How in the WORLD could this be allowed, If they can radiate anywhere, and everywhere in the HF spectrum, how is an illegal CBer or any other out of band operation illegal, and yet, this intentionally causes interference. what kind of crap is this neway, u know, u want choice, thats' just peachy, CABLE/DSL/SATELITE 3 choices... Don't need this, if the Power co/ wants to compete, let them run Fiber optic cable along their lines, with the ridiculuos money they make on electric bills these days, they can afford it....
