

I am a member of the Amateur Radio community and an active volunteer providing emergency communications assistance to the State, County and American Red Cross. I am very distressed about the possible implementation of BPL and its potential interference to our long licensed service. Test already conducted by a number of recognized sources have shown that BPL will have an immediate and adverse effect on most forms of communications in the High Frequency spectrum which we use. Please carefully consider any decision to approve widespread authorization of this system.

Respectfully submitted, Harry Bryant - AA2WN
