

Dear Sir/Madam:

It was recently brought to my attention that the FCC has declared BPL or PLC a "top priority" for their office this year. As an active licensed amateur radio operator, I believe that significant attention should be given to the effects broadband will have on the quality of HF operation. Many of my fellow hams are concerned that broadband transmissions over existing electrical wires will cause severe interference with our hobby. As you proceed, please bear in mind the wonderful accomplishments made by amateur operators over the years and consider the consequences to amateur radio. Thank you for taking the time to read my brief comment and God Bless America.
