

I'm very concerned about the impact that Power Line Communications (PLC) will have on radio traffic. I'm a licensed amateur radio operator, and an electrical engineer for John Deere. Unless it is properly regulated, PLC could cause a devastating amount of radio interference for all users of the spectrum.

Please realize that many communications engineers start out as radio amateurs. These people are an important part of America's technical and industrial strength. Don't allow PLC, due to improper implementation, to jeopardize the Amateur Radio hobby and erode our ability to cultivate future engineers and scientists.

Thank you,
Robert Lehmann
