

Regarding broadband PLC development, I urge the FCC to give the highest priority to consideration of the issue of interference to other services, especially ham radio. Ham radio has proven itself over nearly a century to be of critical service to this country, particularly in time of emergency. It appears that this new service has the potential to create significant interference over a significant portion of ham radio assigned frequencies. Such a development would effectively mean the end of ham radio per se. Please do not permit this to happen.

Sincerely,

Paul R. Brenner
