

Before MORE INTERFERENCE is created in this new age of communications why aren't Federal Regulations ENFORCED? In particular, the Amateur Radio Service regarding unlicensed activity on the 10 meter amateur radio band? INTERFERENCE is enormous without the power line noise already in existence.

If you experts believe the PCL crap will not interfere with my amateur radio antennas your all a sorry group.

Laws, what are laws if there not adhered to?

Before you create another monster, get off your DUPA's and enforce the 10 meter amateur radio band and get rid of, close down completely the CB frequencies of 26965Kcs thru 27405Kcs, PLUS the filthy-mouth illegal operation below 26965 and above 27405KCS. The illegals are operating on U.S. Government frequencies, Military and Industrial, as well.

Laws and Regulations are worthless unless they are enforced.

Remember these last 2 items:

1. When there is a disaster Amateur Radio provides communications in the infected area, VOLUNTARY, a service we provide for this Country (FREE).
2. MONEY talks and BULLSH-T walks.
