

I am a retired professional Radio Operator and also an active amateur operator (Ke3nK). I am extremely concerned about the possibility of approval of Broadband over power lines. Having operated in the H.F. radio spectrum all of my adult life, AND having seen the proliferation of Non-compliant (Part 15), It is appearant were this will end up. Severe RFI on any H.F. receiver. I am also addressing this issue from my previous experience as a professional Military communicator. The Military is, once again, using the H.F. spectrum to support it's global committment. Approval of Broadband over PowerLines will severely degrade our military communicators ability to support the mission.
