

Dear Sirs:

As a licensed Amateur Radio Operator (K2WH), I strongly believe that the internet system referred to as "PLC" or "BPC" would pose dire consequences for radio communications on HF and other frequencies.

Implementing this type of system on the power grid will cause unmanageable radiation from these HV lines into the front ends of sensitive receivers, quite possibly making HF communications as we know it a thing of the past. Therefore I strongly oppose the implementation of this technology.

It is important that the commission remember the vital role amateur radio plays in this countries home land security. A resource that should not be infringed upon or tinkered with.

Thank you and with respect,

Bill Gerhold  
K2WH
