

Dear Sir/ Madam,

In regards to NOI # 03-104.

I believe that the resulting radiated signal in the order of 30uv/m at a distance of 30 meters would overload an amateur receiver to the extent of s9+8.7db. Any amatuer receiving antenna in the 30meter area would at the very least WILL RECEIVE THIS SIGNAL AND NO OTHER. Please reconsider the regulations now in place and remove this source of interferenceto the amateur srevice.

Respectfully submitted,

Vincent Garcell (WA6VJG)
