

Dear Sir/Madame,

I have read about your consideration of PLC or Power Line Communications, and I am against the use of this technology because it has the potential to cause interference to licensed use of frequencies that are used by licensed services.

As a Amateur radio Operator I and others rely on these frequencies to carry on communications in times of disaster and emergency. These frequencies would be badly affected by the PLC signals.

There are plenty of ways that internet service may be provided that work well without cuasing interference. Please vote "NO" to BPL/PLC systems.

Thank You, John Hamilton, KD5INM
