

I am opposed to 03-104 Broadband over Power Lines (BPL). BPL has a great potential to disrupt High Frequency communications to many existing services such as Amateur Radio, Commercial, and Military Communications.

There is NO need for BPL. Current Fiber Optic systems are in use today providing an economical means of Broadband Internet. Even here in Western Colorado.

Any means of BPL approved must be strictly controlled to prevent Radio Frequency Interference to existing users of the spectrum.
