

I have been an amateur radio operator for 40 years and have provided emergency communications during hurricanes and health and welfare traffic to other parts of the world. I am afraid of the ramifications of the new PLC. RF on long transmission lines will radiate. It's a fact and will be a good radiator at that. Just look at the problems in Japan where this has been implemented. Notch filtering had to be used to reduce the effects on sensitive amateur radio equipment. We already have too much unintentional radiators in our neighborhoods. Please don't let this happen to our wonderful hobby.
