

I am NOT in favor of BPL unless and until test have been done to show that it WILL NOT interfere in any way or place with HF reception such as Amateur Radio and Shortwave Broadcast. Any one with any electronics knows that if you put RF on a power line that it will be radiated as if it were a licensed transmitter connected to an antenna. This would be directly carried into all homes and business's even where it was not desired or wanted. It, I believe, will bring up the background noise level and eliminate low power amateur radio communications. To overcome the noise then most will have to start running much higher power than now, contrary to current FCC rules. I DO NOT favor this proposal.
